AN ANALYSIS OF THE PRESIDENT'S BUDGETARY PROPOSALS FOR FISCAL YEAR 1987

The Congress of the United States Congressional Budget Office

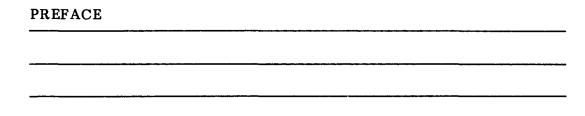

NOTES

Unless otherwise indicated, all years referred to in this report are fiscal years.

Details in the text and tables of this report may not add to totals because of rounding.

The source of data concerning the President's budget is the Office of Management and Budget. The source of other data, unless otherwise noted, is the Congressional Budget Office.

The Balanced Budget and Emergency Deficit Control Act of 1985 is also referred to in this volume more briefly as the Balanced Budget Act.

This analysis of the President's budget for fiscal year 1987 was prepared at the request of the Senate Committee on Appropriations. The report discusses the President's policy proposals in terms of changes from the Congressional Budget Office (CBO) baseline budget projections for 1987-1991. It provides estimates of the budgetary impact of the Administration's proposals using CBO's economic assumptions and technical estimating methods.

This report was prepared by the staff of the Budget Analysis, Fiscal Analysis, and Tax Analysis Divisions under the supervision of James L. Blum, William J. Beeman, and Rosemary D. Marcuss, respectively. Paul Van de Water was responsible for the Summary; George Iden, John Peterson, and Frank Russek for Chapter I; Rosemary D. Marcuss for Chapter II; Michael A. Miller for Chapter III; Charles E. Seagrave and Robert A. Sunshine for Chapter IV; Richard P. Emery for Appendix A; Kathleen M. O'Connell for Appendix B; and Kathy A. Ruffing for Appendix C. Principal contributors are listed in Appendix D.

The authors wish to thank the editorial staff for its assistance in the final production of the report. Thelma L. Jones coordinated the preparation of the report. The final manuscript was prepared for publication by Barbara Bakari, Debra Blagburn, Linda Brockman, Cindy Cleveland, Judy Freeman, Janice Johnson, Dorothy J. Kornegay, Simone McKay, and Earnestine Miles.

The Congressional Budget Office (CBO) estimates that the federal government deficit under Administration policies would decline from \$204.7 billion in 1986 to \$159.7 billion in 1987 and \$40.1 billion in 1991. The Administration's program would reduce total spending and the deficit substantially compared with CBO's baseline projections. Using CBO's economic assumptions and technical estimating methods, however, the resulting deficit exceeds the 1987 target in the Balanced Budget and Emergency Deficit Control Act of 1985 (Public Law 99-177) by \$15.7 billion (see Summary Figure 1 and Summary Table 1).

Summary Figure 1. Federal Deficit Projections^a

SOURCE: Congressional Budget Office; Office of Management and Budget.

^a Includes Social Security, which is off-budget.

CBO has reestimated the Administration's deficit figures for two main reasons. First, CBO assumes a lower rate of real economic growth and, until 1991, higher inflation-adjusted interest rates than does the Administration. (CBO and Administration economic assumptions are compared in Chapter I.) Second, based on the historical relation between appropriations and outlays, CBO estimates that spending for national defense will be significantly greater than shown in the President's budget.

THE ADMINISTRATION'S BUDGET PROGRAM

CBO's baseline projections provide a benchmark against which the Administration's budget program can be measured. The baseline generally assumes that defense and nondefense appropriations are held constant in real terms

SUMMARY TABLE 1. THE BUDGET OUTLOOK UNDER ADMINISTRATION POLICIES (By fiscal year, in billions of dollars) a/

b. The Balanced Budget Act set a target of \$171.9 billion in fiscal year 1986, but limited the sequestration to \$11.7 billion.

and that tax and entitlement laws are continued unchanged. Under these assumptions, CBO projects that the federal deficit will fall from \$208.3 billion in 1986 to \$181.3 billion in 1987 and \$104.3 billion in 1991. The baseline projections are described in more detail in CBO's recent annual report, The Economic and Budget Outlook: Fiscal Years 1987-1991.

As in recent years, the Administration proposes to increase defense spending above baseline levels and to reduce the deficit primarily through large cuts in domestic programs. Over the 1987-1991 period, the Administration's proposals would reduce the deficit by a total of \$224.1 billion (see Summary Table 2).

a. Includes Social Security revenues and outlays, which are off-budget.

b. Surplus.

The Administration is proposing roughly 6 percent real growth in defense appropriations in 1987 and an annual average of about 3 percent real growth over the 1987-1991 period. This policy would increase defense spending by \$120.6 billion above the baseline, which assumes no real growth in defense. To allow for this growth in defense and to reduce the deficit, the required cuts in nondefense spending and increase in revenues total \$34.3 billion in 1987 and \$344.7 billion over five years. They are to be achieved as follows:

- \$35.4 billion in higher revenues. Of this amount, more than half—\$19.4 billion—results from increased Internal Revenue Service (IRS) staff and other IRS initiatives. Extension of the cigarette tax increase of 8 cents per pack will generate \$9.3 billion. Increasing the federal employee contribution to Civil Service Retirement from 7 percent to 9 percent of earnings will bring in an additional \$5.6 billion.
- similar to last year's Administration proposals. The cuts are similar to last year's Administration proposals. The largest reductions—\$45.6 billion—would be targeted on Medicare and Medicaid. General Revenue Sharing would be eliminated, thereby saving \$22.5 billion. Federal employee retirement and health benefits would be cut by \$17.7 billion, child nutrition and food stamps by \$7.3 billion, and guaranteed student loans by \$7.2 billion. No reductions are proposed in Social Security, unemployment compensation, or veterans benefits. Only small cuts would be made in means-tested, income transfer programs.
- \$124.3 billion in lower nondefense discretionary spending. Among the largest proposed reductions are transportation programs (\$17.4 billion), Farmers Home Administration direct loans (\$15.2 billion), civilian agency pay raises (\$13.4 billion), housing health assistance (\$14.5 billion), research and education (\$8.8 billion), training, employment, and social (\$8.4 billion), Pell Grants for needy college students (\$8.2 billion), and elementary and secondary education (\$6.8 billion). Increases are proposed for international affairs, science and space, and the Internal Revenue Service.
- \$45.2 billion in increased offsetting receipts. About \$18 billion would come from increases in premiums charged to participants in Supplementary Medical Insurance (Part B of Medicare). Over \$12 billion would result from fees charged to users of government services, such as navigation and boating assistance, customs and meat inspection, park and forest recreation, and government-sponsored enterprises. (Some proposed user fees are included in

revenues and in other spending categories.) The sale of five Power Marketing Associations and the Naval Petroleum Reserves would raise, net of forgone receipts, about \$11 billion.

o \$24.4 billion in reduced net interest costs would result from the other policy changes.

The Administration's proposed revenue and spending changes are described in detail and analyzed in Chapters II through IV of this report.

As in last year's budget, the Administration proposes to transfer certain federal activities to state and local governments and to reduce federal involvement in credit markets. Of the \$309 billion in proposed nondefense outlay reductions, \$92 billion—or 30 percent—would come from grants to state and local governments. Many grant programs are targeted for elimination, notably General Revenue Sharing (\$22.5 billion in cuts) and grants for the construction of sewage treatment plants (\$2.9 billion). Others would be subject to large reductions, including education, training, and social services (\$17.0 billion), Medicaid (\$10.0 billion), federal—aid highways (\$5.5 billion), other transportation grants (\$8.5 billion), and housing assistance (\$8.1 billion). Under the Administration's proposals, federal grants would represent 1.7 percent of gross national product (GNP) in 1991, as compared with 2.7 percent of GNP in 1985 and 3.4 percent of GNP as recently as 1980.

The Administration proposes to cut federal direct lending over the next five years by one-quarter, or \$44.6 billion. Eliminating Farmers Home Administration and Small Business Administration direct loans would account for \$28 billion of this reduction. The volume of federally guaranteed loans would also be reduced by restricting eligibility and lowering the amount of subsidy. A more detailed overview of the Administration's credit proposals is given in Appendix A.

The proposed increases in defense and the cuts in nondefense programs would change the composition of federal spending as set forth in Summary Table 3 and Summary Figure 2. With 3 percent real growth, defense outlays would grow only slightly less rapidly than GNP. National defense spending would absorb 6.4 percent of GNP in 1987 and 6.2 percent in 1991. In the CBO baseline, which assumes no real defense growth, the 1991 defense share is only 5.7 percent of GNP.

The budget proposals would accelerate the projected decline in nondefense spending. Nondefense discretionary spending currently represents 4.1 percent of GNP, about the same level as it did 25 years ago. In the baseline it declines to 3.4 percent of GNP by 1991, and under the Administration program it would fall to 2.7 percent. Spending for Social

xiii

Security and Medicare benefits is projected to rise slightly in the baseline relative to GNP but remains constant under Administration policy. Other entitlements and mandatory spending are projected to decline from their current level of 4.4 percent of GNP, but the drop is greater with the budget proposals.

CBO BUDGET ESTIMATES

For purposes of comparability with the CBO baseline projections and with other deficit reduction plans, the foregoing estimates of the Administration's budget use CBO baseline economic and technical estimating assumptions. As indicated earlier, however, CBO's estimates of the deficit are somewhat higher than those of the Administration.

Summary Table 4 shows the CBO reestimates of the Administration's budget. The CBO reestimates add \$16.1 billion to the projected deficit in 1987, \$38.7 billion in 1988, and \$41.4 billion in 1991. In 1987 and 1988, technical differences between CBO and the Administration predominate. Differences in economic assumptions are more important thereafter. The reestimates of revenues and spending are detailed in Appendixes B and C, respectively.

CBO's economic assumptions reduce the estimated deficit slightly in 1986 and 1987, but they add to the deficit estimates by increasing amounts thereafter. In 1991, CBO's estimate of the deficit is \$24.4 billion higher than that of the Administration because of differing economic assumptions. CBO's economic assumptions add to both revenues and outlays as a result of higher rates of inflation than the Administration assumes. Because CBO assumes lower real growth and higher real interest rates than the Administration, however, the addition to outlays is greater than the addition to revenues.

CBO's real growth projection is based on average economic growth for nine-year periods following recession troughs. On average, since World War II, the annual growth rate of real over such nine-year periods has been 3.7 percent, and the CBO projection closely approximates that result. The Administration's projection for real growth is not much higher for any one year and is well within the range of historical experience. By 1991, however, the level of real gross national product assumed by the Administration is about $2\frac{1}{2}$ percent higher than in CBO's projection.

Both the Administration and CBO assume a decline in nominal and real (inflation-adjusted) interest rates over the 1987-1991 period. By 1991, both assume a Treasury bill rate between one and two percentage points above inflation—about equal to the average over the past 30 years. But the CBO

assumptions envision real interest rates declining gradually to this level, while the Administration assumes that inflation-adjusted rates return much more quickly to their historical averages.

Technical estimating differences between CBO and the Administration add an average of \$18 billion per year to the projected deficits. Of this amount, about \$14 billion per year involves national defense. Each year the Congress appropriates new budget authority, which allows the Department of Defense to enter into spending obligations. But these obligations may not result in cash outlays for some years. CBO uses historical spending rates to estimate the amount of outlays that will occur each fiscal year from given levels of budget authority. The Administration, however, believes that historical defense spending patterns will not apply in the future.

b. Surplus.

a. Includes Social Security revenues and outlays, which are off-budget. On-and off-budget totals are shown in Summary Table 5.

Other technical estimating differences, in total, increase both estimated revenues and outlays. On the revenue side, the major difference between CBO and the Administration concerns the proposed limitation on pay raises for federal civilian employees. CBO assumes that this proposal has no net effect on revenues, while the Administration assumes a \$7 billion revenue loss. Most of the remaining differences on the outlay side result from the higher net interest costs necessitated by other technical reestimates to revenues and outlays. These additional debt service costs add \$20 billion over the 1987-1991 period. CBO and the Administration also differ in their estimates of farm price supports, Outer Continental Shelf escrow releases, and the proceeds from sale of the Naval Petroleum Reserves and Power Marketing Administrations.

SOURCE: Congressional Budget Office.

The total outlays and revenues of the federal government includes both on-budget and off-budget activities. The Balanced Budget Act returned all previously off-budget entities to the budget, but moved off-budget the Social Security trust funds-Old-Age, Survivors, and Disability Insurance (OASDI). On-budget and off-budget activities must be added together, however, to determine the total federal deficit that must be financed by borrowing from the public. The estimated total deficit is also used in calculating the excess deficit amount for purposes of the Balanced Budget Act.

This volume focuses on total federal government fiscal activities because of their significance for the economy and for implementing the Balanced Budget Act. Moreover, distinguishing between on-and off-budget items would add significant complexity to the summary tables and thereby obscure the basic analytical story. Nevertheless, it is important to note that Social Security represents roughly 20 percent of outlays and 25 percent of revenues (see Summary Table 5). Also, in contrast to the on-budget activities, the Social Security trust funds are running growing surpluses. The Administration's fiscal year 1987 proposals include a modest speedup in the deposit of Social Security tax payments by state and local governments and a reduction in Social Security administrative costs, but no changes in benefit levels.
